UniStream™ Uni-I/O™ Modules

Technical Specifications UIS-04PTN

This guide provides specifications for Unitronics' Uni-I/O™ module UIS-04PTN. This module comprises:

• 4 RTD inputs

Uni-I/O modules are compatible with UniStream $^{\text{TM}}$ family of Programmable Logic Controllers. They may be either snapped onto the back of a UniStream $^{\text{TM}}$ HMI Panel next to a CPU-for-Panel to create an all-in-one HMI + PLC controller, or installed on a standard DIN Rail using a Local Expansion Adapter.

Installation Guides are available in the Unitronics Technical Library at www.unitronics.com

Number of inputs 4 Input range (1) Input Type Nominal Values Over/Under-range Values * PT100 0.00385 0.00392 0.00391 -200°C ≤ T ≤ 850°C (-364°F ≤ T < -328°F) 0.00er-range: 850°C < T ≤ 860°C (1,562°F < T ≤ 1,580°F) Under-range: -150°C ≤ T < -100°C (-328°F ≤ T ≤ 1,580°F) NI100 0.00618 -100°C ≤ T ≤ 260°C (-148°F ≤ T ≤ 500°F) Under-range: -150°C ≤ T < -100°C (-238°F ≤ T < -148°F) NI120 0.00672 -80°C ≤ T ≤ 260°C (-112°F ≤ T ≤ 500°F) Under-range: -130°C ≤ T < -80°C (500°F < T ≤ 518°F) Resistance 0Ω ≤ R ≤ 390Ω 390Ω < R ≤ 395.85Ω * Overrflow or Underflow (1) is declared when an input value exceeds the Over-range boundaries respectively. Sensor Type 4, 3 and 2 wire (2) Absolute maximum rating ±50V at any pin relative to power-supply 0V rating from the proper supply 0V	RTD Inputs

Step response (4)	Smoothing	Noise Rejection Freq	Noise Rejection Frequency	
(0 to 100% of final value)	(filter)	60Hz	50Hz	
	None	465ms	535ms	
	Weak	930ms	1070ms	
	Medium	1860ms	2140ms	
	Strong	3720ms	4280ms	
Update time (4)	Noise Rejection Frequency		Update Time	
	60Hz		465ms	
	50Hz		535ms	
Cable	Shielded, see ins	Shielded, see installation guide for details		
Diagnostics (1) (5)	Input Overflow or Underflow, sensor connection fault (6) (7)			

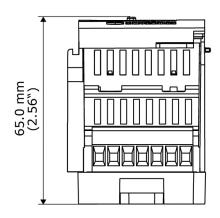

IO/COM Bus	
Bus current consumption	90mA maximum

LED Indications			
Input LEDs	Red	On: Input value is in Overflooccurs	ow, Underflow, or a connection fault
Status LED	A triple color LED. Indications are as follows:		
	Color	LED State	Status
	Green	On	Operating normally
		Slow blink	Boot
		Rapid blink	OS initialization
	Green/Red	Slow blink	Configuration mismatch
	Red	Slow blink	No IO exchange
		Rapid blink	Communication error
	Orange	Rapid Blink	OS Upgrade

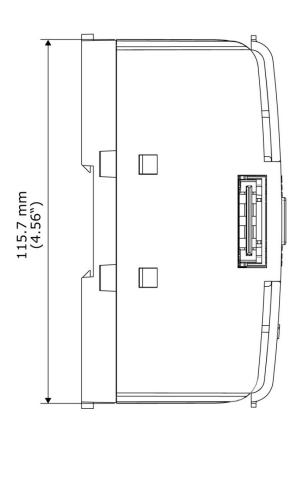

Environmental		
Protection	IP20, NEMA1	
Operating temperature	-20°C to 55°C (-4°F to 131°F)	
Storage temperature	-30°C to 70°C (-22°F to 158°F)	
Relative Humidity (RH)	5% to 95% (non-condensing)	
Operating altitude	2,000 m (6,562 ft)	
Shock	IEC 60068-2-27, 15G, 11ms duration	
Vibration	IEC 60068-2-6, 5Hz to 8.4Hz, 3.5mm constant amplitude, 8.4Hz to 150Hz, 1G acceleration

Notes:

1. The UIS-04PTN measures values that are slightly higher or lower than the nominal input range (i.e. Input Over/Under-range respectively).

Note that when input Overflow, Underflow or a connection fault occurs, it is indicated in the corresponding I/O Status tag (refer to the UniLogic help for details) as well as by the respective input LED (see LED Indications), while the input value is registered as follows:

Fault Type	Registered Value in the Input Tag
Overflow	32,767
Underflow	-32,767
Connection fault	-32,768

2. The UIS-04PTN inherently supports 3-wire sensors.

4-wire sensors may be connected by utilizing 3 of the sensor wires; in-order to achieve the specified performance, all sensor wires shall be of identical type and length just as with a 3-wire sensor connection.

2-wire sensors may also be connected; performance in this case will degrade because of the wires` resistance.

Refer to the UIS-04PTN installation guide for detailed installation instructions.

- 3. For temperature measurement, the value is represented in 0.1° units. For example, a temperature of 12.3° is represented as 123 at the Value tag.
- 4. Step response and update time are independent of the number of inputs that are used.
- 5. See LED Indications Table above for description of the relevant indications. Note that the diagnostics results are also indicated in the I/O tags and can be observed through the UniApps™ or the online state of the UniLogic™.
- 6. Sensor connection fault check is active by default for both temperature and resistance measurements.
- 7. Sensor connection fault check may interfere with some test equipment like resistance/RTD simulators and thus may induce reading errors or cause malfunction of the test equipment and/or the UIS-04PTN.

In order to interoperate correctly with such equipment, you may set the Disable Fault Detection I/O tag. This will disable connection fault check for all inputs.

Note that when this tag is set, the UIS-04PTN will not check, or report, connection faults; thus, the reading in such case is unpredictable.
